Angle Skye's seat pan forward 4 degrees by depressing a lever to put your body in a healthful work-intensive posture.

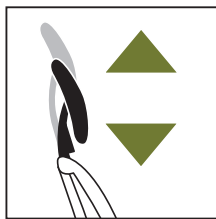

Sit upright or slightly reclined in the Skye chair and receive comfortable support for your entire body in these common work postures. Lock the seat back in any position with just the flip of a lever.

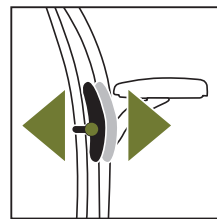

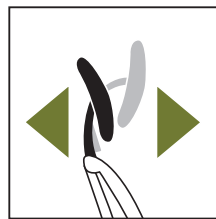

Recline over a 40-degree range and experience the support Skye's synchro-tilt motion provides even in deeply reclined postures.

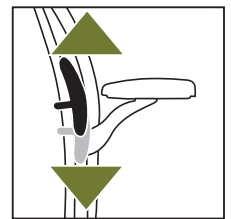

Lift yourself slightly off the seat and turn the **reclining tension** adjustment knob to any of four settings for the one that feels comfortable for your weight.

Adjust Skye's optional **headrest** up and down through a 3 1/2-inch range and forward and back over a 3-inch range. In addition, you can tilt the headrest up to 35 degrees.

Move Skye's **lumbar support** up and down over a 6-inch range on the vertical spine located behind the chair's back. Fine-tune the lumbar support depth over a 3/4-inch range.
